

SWITCHED RESELLER

The service providers who choose to take advantage of TWT's experience, have a head start when it comes to grasping all market opportunities.

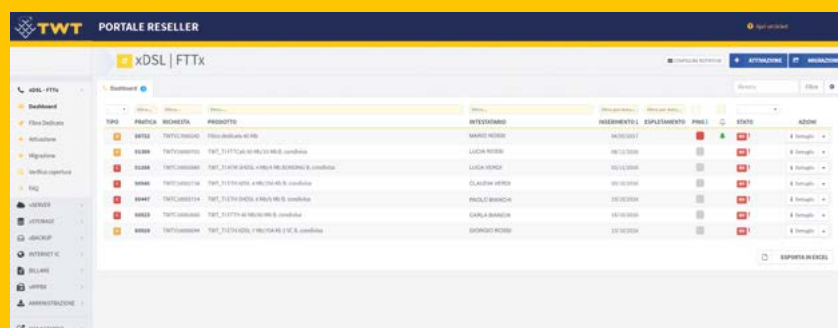

SERVICES SPECIFICALLY STUDIED TO DELIVER INNOVATIVE AND COMPETITIVE SOLUTIONS

Switched Resellers are those resellers who have their own infrastructure and wish to directly manage the origination and termination of telephone traffic and connectivity services, with a view to growing their businesses.

Being a member of the TWT Reseller family enables you to develop new business opportunities, increase sales and receive all the support you need to reach your company growth goals. In fact, TWT provides specialized technical support and all the necessary tools to enable Resellers to optimize their management of Customer relations.

THE RESELLER PORTAL

TWT has created the Reseller Portal, a **provisioning, management and reporting area for the exclusive use of operators, where, entirely on their own, they can activate and migrate lines, manage equipment, activate services, maintain customer lists and conduct any other type of activity necessary for a rapid management of all resources.**

This solution has been specifically studied to provide voice traffic origination and termination to and from Client-owned equipment.

Termination Service

This service enables the Reseller to forward traffic to the interconnection point with TWT, where it is terminated by the TWT through its own interconnections.

Collection Service

The service enabling traffic Collection from fixed and mobile networks.

VAS Numbers

VAS (Value Added Services) numbers target those Resellers wishing to handle access provision through non geographic numbers using their own brand name.

The service is provided through TWT's intelligent network, which handles calls according to routing criteria customizable to Client requirements.

It is possible to **purchase individual access lines** through the special Reseller Portal in which **each line may be activated according to the various profiles available.**

The service consists in a dedicated port and connectivity to the Reseller network from one of the TWT network access points where each access line will be delivered.

Complete coverage and the widest range of technical services are guaranteed by the possibility to choose from several different last mile carriers.

Through the use of our technological platform, the provisioning process is simple and rapid, enabling the purchase of individual profiles that are customizable in terms of access technology and bandwidth.

The Co-location service enables Resellers to use an **infrastructural outsourcing solution, while retaining full management and ownership of their equipment.**

In fact, this service enables Resellers to house their own and their Clients' servers and network equipment in the TWT data room, which ensures maximum scalability and flexibility of resources.

Systems and infrastructures are managed in such a way as to guarantee Business Continuity (electricity, air-conditioning, fire-prevention, perimeter security) and are subject to constant monitoring and surveillance by specialized staff.

TWT Cloud Connect enables you to reach the main Cloud Players via private access, which guarantees far greater reliability and performance than any internet-based solution.

FUNCTIONS AND ADVANTAGES:

- **Private connection**
- **Private data storage**
- **Reliability**
